

Acknowledgement

I acknowledge and appreciate many people for their contributions to this work. First, I address my gratitude to Prof. Wen-Hung Liao. This thesis is finished successfully under his direction and support. In addition, I am grateful to Pei-Ying Chiang for her kindly advice and suggestion, which facilitate the successive work readily.

Second, I have to express my thanks for each member of Visual Information Processing Lab in NCCUCS. All of your opinions are precious and helpful to me. The discussions and interactions with you are certainly impressive and unforgettable. I surely enjoy the life after joining this group.

Finally, this paper is dedicated to my parents and families, for your unconditional support and devotion these years.
