

## **Acknowledgements**

This thesis could not be completed without the supports and advices from Dr. Claire Hsun-huei Chang who not only served as my advisor but also encouraged me throughout my academic years in NCCU. She, the other faculty members, our staff member, and all my classmates have patiently guided me through the process of finishing my thesis. I could like to thank them all for being with me whenever I felt helpless. Lastly, I could like to thank my parents for being supportive and understanding.
