Preliminary	1
Chapter 1. Investment Decision in Defined Contribution Pension Schemes Incorporating Incentive Mechanism	8
1.1 Introduction	8
1.2 Literature Review	11
1.3 Proposed Model	15
1.4 Asset Allocation for Restricted Form	19
1.5 Asset Allocation for General Form	32
1.6 Discussions	38
Chapter 2. Non-Myopic Portfolio Choice with Minimum Guarantees	41
2.1 Introduction	41
2.2 Proposed Model	44
2.3 The Optimization Problem	47
2.4 Explicit Solution in Iso-Elastic Utility	50
2.5 Numerical Illustrations	51
2.6 Discussions	64
Chapter 3. Dynamic Asset Allocation under Learning about Inflation	70
3.1 Introduction	70
3.2 Learning about Inflation	75
3.3 Dynamics of Investment Opportunities	79
3.4 Optimization Problem	82
3.5 Numerical Analyses	89
3.6 Discussions	100
Appendix	103
1 Replication of Rolling Bond under Vasiek Interest Rate Model	103
2 Deviation of Eq.(1.15)	104
3 Replication of Rolling Bond under CIR Interest Rate Model	106
4 Deviation of Eq.(2.18)	107
5 Dynamics of Zero Coupon Bond of Eq.(3.14)	111
References	115

List of Figures

1.1	Optimal portfolio holdings of cash, stocks and nominal bonds given time horizon $T = 30$ years	26
1.2	Separation of four fund effects in optimal portfolio selections and their behaviors in each component over time	28
1.3	Weights of stock index and bond for separated mutual funds	30
1.4	Optimal portfolio holding distributions of cash, stocks and nominal bonds given time horizon $T = 30$ years	31
1.5	Weight distributions of stock index and bond for separated mutual funds	33
1.6	Optimal portfolio holdings of cash, stocks and nominal bonds given time horizon $T = 30$ years under incentive program	36
2.1	The range of optimal portfolio proportions ($\gamma = -1$ and $x = 4\%$)	53
2.2	The range of optimal portfolio proportions ($\gamma = -1$ and $x = 3\%$)	55
2.3	The range of optimal portfolio proportions ($\gamma = -1$ and $x = 5\%$)	56
2.4	The range of optimal portfolio proportions ($\gamma = -3$ and $x = 4\%$)	57
2.5	The range of optimal portfolio proportions ($\gamma = -5$ and $x = 4\%$)	58
2.6	The investment weights of the largest and smallest terminal wealth ($\gamma = -1$ and $x = 3\%$)	59
2.7	The investment weights of the largest and smallest terminal wealth ($\gamma = -1$ and $x = 4\%$)	60
2.8	The investment weights of the largest and smallest terminal wealth ($\gamma = -1$ and $x = 5\%$)	61
2.9	The investment weights of the largest and smallest terminal wealth ($\gamma = -3$ and $x = 4\%$)	62
2.10	The investment weights of the largest and smallest terminal wealth ($\gamma = -5$ and $x = 4\%$)	63
2.11	CRRA mutual fund and guarantee hedge demand ($\gamma = -1$ and $x = 5\%$)	65
2.12	CRRA mutual fund and guarantee hedge demand ($\gamma = -1$ and $x = 4\%$)	66
2.13	CRRA mutual fund and guarantee hedge demand ($\gamma = -1$ and $x = 3\%$)	67
3.1	The optimal asset allocation strategy ($\gamma = -1.5$ and $T = 30$)	91
3.2	The effect on wealth of different investment horizons under the learning method	93

3.3	The effect on wealth of different risk-averse parameters under the learning method	95
3.4	The effect on wealth of different standard deviations of CPI under the learning method	97
3.5	The effect on wealth of different standard deviations of the inflation rate under the learning method	99
3.6	The effect on wealth of different variances of the estimated error under the learning method	100

List of Tables

1	Consumer Price Index	2
1.1	Parameter values used in the numerical analyses	27
2.1	Estimation of model parameters	52
3.1	Model parameters used in the numerical analyses	90
3.2	The analysis of learning effect under different investment horizons	94
3.3	The analysis of learning effect under different risk-aversion parameters	96
3.4	The analysis of learning effect under different standard deviations of CPI	98
3.5	The analysis of learning effect under different standard deviations of the inflation rate	99
3.6	The analysis of learning effect under different variances of the estimated error	101
