Introduction	1
1 What Do We Gain from Estimating Euler Equations with Higher-Order Approximations?	4
1.1 Introduction . . . . .	4
1.2 Model Setup and Its Numerical Solution . . . . .	8
1.2.1 The Model . . . . .	8
1.2.2 Numerical Solution to the Model . . . . .	10
1.3 Problems Associated with the Euler Equation Estimation . . . . .	12
1.4 Higher-Order Approximations to the Consumption Euler Equation . . . . .	15
1.4.1 Preferences for Higher-Order Moments . . . . .	15
1.4.2 How Might Approximation Bias Be Reduced? . . . . .	17
1.5 Monte Carlo Evidence . . . . .	18
1.5.1 Generating Artificial Data . . . . .	18
1.5.2 Approximation Bias When Only a Second-Order Moment Is Included	20

1.5.3	Can Approximation Bias Be Reduced When Higher-Order Moments Are Introduced? . . . . .	26
1.6	The Optimal Approximation Order . . . . .	33
1.6.1	Sample Size and the Optimal Approximation Order . . . . .	34
1.6.2	The Value of $\rho$ and the Optimal Approximation Order . . . . .	40
1.6.3	Criteria of Selecting the Approximation Order . . . . .	42
1.6.4	Performance of the Model Selection Criteria . . . . .	45
1.7	Conclusion . . . . .	51
2	Uncovering Preference Parameters with the Utilization of Relations between Higher- Order Consumption Moments . . . . .	53
2.1	Introduction . . . . .	53
2.2	Model Setup and Its Numerical Solution . . . . .	56
2.2.1	The Model . . . . .	56
2.2.2	Numerical Solution to the Model . . . . .	56
2.3	Relations between Consumption Moments . . . . .	57
2.3.1	The Baseline Model . . . . .	57
2.3.2	The Precautionary Saving . . . . .	59
2.3.3	Consumption Risk and Higher-Order Moments . . . . .	60
2.3.4	Comparative Statics . . . . .	63
2.4	Nonlinear Instruments toward Better Estimation Performance . . . . .	68
2.4.1	The Artificial Consumption Data . . . . .	68
2.4.2	Nonlinear Transformations of the Instruments . . . . .	69
2.4.3	Monte Carlo Evidence . . . . .	75
2.5	Choosing the Approximation Order . . . . .	81
2.5.1	The Optimal Approximation Order . . . . .	82
2.5.2	Criteria of Selecting the Approximation Order . . . . .	83
2.5.3	Evaluation of the Model Selection Criteria . . . . .	84
2.6	Conclusion . . . . .	88

3	Precautionary Saving and Consumption with Borrowing Constraints	90
3.1	Introduction . . . . .	90
3.2	Model Setup . . . . .	93
3.3	Optimal Consumption with Borrowing Constraints . . . . .	94
3.3.1	High Wealth Level ( $W_1 > W_H$ ) . . . . .	98
3.3.2	Middle Wealth Level ( $W_L \leq W_1 \leq W_H$ ) . . . . .	99
3.3.3	Low Wealth Level ( $W_1 < W_L$ ) . . . . .	100
3.4	Theoretical Implications . . . . .	101
3.4.1	Precautionary Saving and Borrowing Constraints . . . . .	101
3.4.2	Borrowing Constraints and the Prudence of Value Function . . . . .	105
3.4.3	Concavity of Consumption Function . . . . .	108
3.5	Comparative Statics . . . . .	109
3.5.1	Change in Income Volatility . . . . .	109
3.5.2	Change in Expected Income . . . . .	111
3.5.3	Change in the Probability of Being Constrained . . . . .	113
3.6	Empirical Implications . . . . .	117
3.6.1	Excess Sensitivity of Consumption . . . . .	117
3.6.2	Sample Splitting . . . . .	120
3.6.3	Higher-Order Moments . . . . .	122
3.7	Conclusion . . . . .	124
	Appendix . . . . .	126
	Reference	129

# List of Figures

1.1	OID Test with Different Sample Sizes . . . . .	26
1.2	Biases of Different Sample Sizes and Approximation Orders . . . . .	36
1.3	Standard Deviation of the $\beta_2$ Estimates from Different Sample Sizes and Approximation Orders . . . . .	37
1.4	MSE with Different Sample Sizes and Approximation Orders . . . . .	39
1.5	The Optimal Approximation Order . . . . .	39
1.6	The Optimal Approximation Order of Different Values of $\rho$ . . . . .	41
1.7	The Distribution of the Selected Order (N=100000) . . . . .	48
1.8	MSE of the $\beta_2$ Estimates from Different Model Selection Criteria . . . . .	50
2.1	Optimal Consumption Function of the Baseline Model . . . . .	58
2.2	The First and Second Consumption Moment . . . . .	60
2.3	Consumption Moments and Cash on Hand to Income . . . . .	62
2.4	Consumption Risk and Higher-Order Moments . . . . .	63
2.5	Comparative Statics of the Consumption Function . . . . .	65
2.6	Comparative Statics of Consumption Moments . . . . .	66
2.7	Comparative Statics on the Relation between Consumption Risk and Higher Moments . . . . .	66
2.8	Fitting Consumption Moments with IV . . . . .	70
2.9	<i>Ex Post</i> Relation between Consumption Risk and the Third-order Moment	72
2.10	<i>Ex Post</i> Relation between Consumption Risk and the Fourth-order Moment	72
2.11	Fitting the Consumption Risk with New Instrument Sets . . . . .	74
2.12	Fitting Consumption Moments with NIV . . . . .	76

2.13	Bias of $\beta_2$ Estimates . . . . .	80
2.14	Standard Deviation of $\beta_2$ Estimates . . . . .	80
2.15	The Optimal Approximation Order of IV and NIV Estimation . . . . .	83
2.16	MSE from the NIV Estimation . . . . .	84
3.1	Consumption Functions and the Precautionary Saving . . . . .	102
3.2	$V'(\cdot)$ and Uncertainty . . . . .	105
3.3	Precautionary Saving and Income Volatility . . . . .	111
3.4	Consumption and Change in Expected Income . . . . .	112
3.5	Effects of Change in $p$ . . . . .	116

# List of Tables

1.1	Second-Order Approximation ( $\rho = 3, N=1,000$ ) . . . . .	22
1.2	Second-Order Approximation ( $\rho = 3, N=10,000$ ) . . . . .	24
1.3	Higher-Order Approximation: OLS Estimation ( $\rho = 3, N=10,000$ ) . . . . .	28
1.4	Higher-Order Approximation: IV1 Estimation ( $\rho = 3, N=10,000$ ) . . . . .	30
1.5	Higher-Order Approximation: IV2 Estimation ( $\rho = 3, N=10,000$ ) . . . . .	32
1.6	$\beta_2$ Estimates with Different Sample Sizes and Approximation Orders ( $\rho = 3$ )	35
1.7	MSE of $\beta_2$ Estimates ( $\rho = 3$ ) . . . . .	38
1.8	MSE of $\beta_2$ Estimates ( $\rho = 1$ ) . . . . .	41
1.9	Approximation Order Selected by Different Criteria . . . . .	47
1.10	$\beta_2$ Estimates Selected by Different Criteria . . . . .	49
1.11	MSE of $\beta_2$ Estimates Selected by Different Criteria . . . . .	50
2.1	Parameter Values . . . . .	64
2.2	$\beta_2$ Estimates . . . . .	78
2.3	MSE of $\beta_2$ Estimates from NIV Estimation . . . . .	82
2.4	Approximation Order Selected by Different Criteria . . . . .	86
2.5	Post-selection $\beta_2$ Estimates . . . . .	87
2.6	MSE of the Post-selection $\beta_2$ Estimates . . . . .	87
3.1	Thresholds and the Borrowing Constraints . . . . .	97
